VICTOR FITZJARRALD

Science Teacher

Harrison High School · 2008–2010 · Colorado Springs, CO

The career starts in the classroom—student teaching, rigorous science courses, and writing programs students actually run.

WHAT I DID

- Completed student teaching and taught astronomy, chemistry, and earth science.
- Wrote and ran a programming program for computational thinking.
- Built classroom habits—clarity, care, high expectations—that later shaped every product role.

WHAT I LEARNED

- Students remember programs you build with them more than units you merely cover.
- Educator empathy is the root of Teacher → Admin → Product.

OUTCOMES

Student teaching completed

Astronomy · Chemistry · Earth Science

Programming program authored & run
